

- Q1. Given the list numbers = [10, 20, 30, 40, 50], print the second and fourth elements of the list?
- Q2. Given the list numbers = [1,2,3,4,10,9,8,4], print the last three numbers using slicing?
- Q3. Create a list of numbers and print both the maximum and minimum values using max() and min()?
- Q4. Create a list of letters, sort them and print the list in reverse order?
- Q5. Create a list of strings and count how many times a specific string appears using count()?
- Q6. Create a list of colours. Swap first and last elements and print updated list?
- Q7. Write code to get 'hello' from list l = [25,30,[26,27,28,'hello'],[32,38]]
- Q8. Replace 27 with 43 in the above list?
- Q9. Insert value 'True' at second last position?
- Q10. Merge two sorted lists into a single sorted list?
- Q11. Create empty list and take user input fruits using append()?
- Q12. Add three more fruits at once to the list?
- Q13. Sort the list using list method?
- Q14. Create even and odd lists and combine using extend()?
- Q15. Find sum and average of list [4,5,1,2,9,7,10,8]?
- Q16. Remove last fruit using pop(). fruits=['apple','banana','orange','mango']
- Q17. Find length of list?
- Q18. Clone or copy a list?
- Q19. Add three city names using append()?
- Q20. Append one list to another list?
- Q21. Count occurrences of an element in a list?
- Q22. Find second smallest number in a list?
- Q23. Get unique values from a list?
- Q24. Reverse elements of a list?
- Q25. Count occurrences of specific item?
- Q26. Reverse a list using slicing?
- Q27. Replace last item with 'Pineapple'?
- Q28. Concatenate list items into a single item?
- Q29. Copy list using slicing method?
- Q30. Access second element of second list in nested list [[1,2],[3,4],[5,6]]
